DETAILED ACTION

Allowable Subject Matter

Claims 1-54 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 24 and 51, see reasons for allowance in office action dated 8/16/04.

Regarding claims 1, 13, 28 and 40, the closest prior art of record, specifically, Bonta (U.S. Patent Application Pub. No. 2001/0055969) discloses a method for synchronizing transmission of a rescue channel with mobile station attempts at receiving the rescue channel to increase the likelihood that the MS will receive the rescue channel and assist in rescuing a connection with a network (See ¶ 3 and 12). More specifically, Bonta discloses transmitting the rescue channel from base stations at a time during a SUPER AUEMPT time interval, and configuring the mobile station to attempt to receive the rescue channel from the base stations during a SUB-AUEMPT period. One SUB-AUEMPT period is contained in one SUPER AUEMPT interval (See ¶ 29).

However, Bonta alone fails to specifically disclose sequentially configuring the MS in an attempt to receive the rescue channel from one or more base stations during each of a plurality of SUB_ATTEMPT periods within one SUPER_ATTEMPT period, as recited in claims 1, 13, 28 and 40. Furthermore, Bonta contains no disclosure which provides motivation where one skilled in the art would have find it obvious to sequentially configure the mobile station in an attempt to receive the rescue channel from one or more base stations during each of a plurality of SUB_ATTEMPT periods within one SUPER_ATTEMPT period.
